

References

References I

This project can produce **two** BibTeX files; the template combined-PDF path uses Pandoc `--natbib` plus BibTeX and merges every `manuscript/*.bib` for citation resolution:

- ▶ `manuscript/references.bib` — single-query pipeline output (`scripts/run_search_pipeline.py`).
- ▶ `manuscript/references_deep.bib` — deduplicated multi-keyword deep-search output (`scripts/run_deep_search.py`). Every citation in `[@sec:supplemental_s1]` resolves against this file. The supplemental section is auto-composed by `scripts/s_compose_literature_review.py`; do not edit by hand.

To regenerate the standard bibliography:

```
uv run python projects/templates/template_search_project/s
```

To regenerate the deep-search bibliography (10 papers per keyword, fully enriched, LLM-summarised):

References II

```
uv run python projects/templates/template_search_project/s  
uv run python projects/templates/template_search_project/s
```

To validate that either .bib is syntactically clean and contains the required fields per entry type:

```
uv run python -m infrastructure.reference.citation.cli val  
    projects/templates/template_search_project/manuscript/r  
uv run python -m infrastructure.reference.citation.cli val  
    projects/templates/template_search_project/manuscript/r
```
